DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-7 are seemingly drawn to the apparatus; however, no specific structure of the apparatus is recited in the claims. Claim 1 recites "a mechanism for measuring transmissivity", which indicates process, rather than the structure of the apparatus. Although the claim can be interpreted as reciting a spectrophotometer and a flow cell, it does not clearly state so. The same is true for all other claims.

In claim 6 it is not clear, what is meant by the expression "plating solution dwell portion"? Is this a flow cell?

Claim 7 recites a limitation for the electroless composite plating solution, which was not recited in the body of the parent claim, and therefore lacks an antecedent basis.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. **Claims 1-7** are rejected under 35 U.S.C. 102(b) as being anticipated by Asu et al. (JP1-142144A).

Art Unit: 1743

Asu discloses an automatic system for analyzing electroless composite plating solution comprising a spectrophotometer using a vertical flow cell with a cross sectional area of at least two times of the cross sectional areas of the input and output (see Figure), and a timer, which is a part of any CPU used in an automated analytical method; the spectrophotometer is capable of a conventional calibration and measuring wavelengths in the ranges indicated in claim 3.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. *JP 53095695 A* discloses determination of concentrations of tri- and hexavalent chromium ions in chromate plating bath at two wavelengths, 540 nm and 630 nm; *Yoshio et al. (JP10142143)* disclose an automated system for spectrophotometric nickel concentration measurements in an electroless nickel plating bath at two wavelengths.
